Asterisk – the leading open source communications engine

Asterisk is open source software that turns an ordinary computer into a voice communications server. Asterisk powers IP PBX systems, VoIP gateways, conference servers and [more](#). Small businesses, large businesses, call centers, carriers and governments around the world have phone systems powered by Digium and Asterisk.

Count on Digium cards for reliable connections

We can help you build a custom communications system with Asterisk

Our expert staff can combine free Asterisk open source software, Digium interface telephony cards, and Asterisk components to build a Custom Telephony solution for your business. Asterisk can be configured as an IP PBX, a voice mail server, IVR server, VoIP gateway, call recorder, ACD and other telephony applications.

Digium, the creators and primary sponsors of the Asterisk project offer a complete line of [analog](#), [hybrid](#) and [digital](#) telephony interface cards.

Digium© provides quality [hybrid analog and digital cards](#) that extend the functionality of Asterisk© to connect to the Public Switched Telephone Network (PSTN). A large number of custom telephony solutions are made possible with this powerful combination of Digium hardware and Asterisk open source software.
